

SAFESIGNAL

Saving Lives in the Digital Public Space

safesignal.com

Yitzhak Maimon

Institution :Ariel University.

Degree: B.Sc. in Computer Science & Mathematics.

About me: I love doing meaningful things, exploring new ideas, and swimming.

THE SILENT CRISIS

Critical distress signals are lost
in the digital noise.

+720K

Suicides / Year Worldwide
(Source: WHO official data)

High

Digital Correlation
(Distress signs left online)

0

Real-Time Detection
(No active global system exists)

THE TECH STACK

Backend

Python + Flask 3.1
boto3 (AWS SDK)
Pandas + Jinja2

DevOps

Docker + docker-compose
Amazon EC2 + GitHub

AWS

Amazon Bedrock Agent
Bedrock Knowledge Base (RAG)
DynamoDB + S3

Frontend

HTML + Jinja2 / CSS / JS

SAFESIGNAL — FLOW DIAGRAM

SYSTEM ARCHITECTURE & TOOL INVOCATION FLOW

WHAT WE DETECT

Real-time classification across three critical risk categories

Each detection triggers an immediate alert to a trained professional responder.

LESSONS LEARNED

Works Well

End-to-end AI pipeline —RAG, MCP tools, Flask and Docker all integrated into one running system.

Challenges

Connecting all components into one seamless system —making everything work together end-to-end was technically demanding.

Next Steps

.1 Build a KB from posts by people who died by suicide — requires deep research as data is scarce. laicos htiw etargetnl .2 dna selfiorp rotnom ot skrowten ni sftihs laroivaheb tceted .emti revo snrettap gntiirw

PREVENTING THE NEXT TRAGEDY

Join us to secure the digital frontline.

Every second counts. · Every signal matters. · Every life is worth saving.
